Subject Index

Abrasive stripping voltammetry 359
Absorbance detection, rapid scanning, application to GC analysis of gasoline 194
Accelerator MS, application to biomolecular tracing 142
Algorithms, multicomponent analysis 86
Algorithms, multivariate linear calibration in spectroscopy 270
Amperometric detectors, use in HPLC 298
Analytical chemistry, its status in the scientific arena 54
Analytical processes, simulations using Visual Basic 131
Antibodies, immobilized, use in residue analysis 294
Antioxidants, determination by tandem MS and HPLC 164
Automated flow-rate gradient technique, determination of physicochemical parameters 373

Beer bitter acids, history and analytical chemistry 275
Belousov–Zhabotinsky reaction 169
Bioactive compounds, detection using a quartz-crystal microbalance 344
Bioanalysis, sample preparation using microdialysis and ultrafiltration capillaries 171
Bioanalysis, use of FTIR spectroscopy 206
Biological matrices, application of ICP-MS to elemental analysis 68
Biological systems, use of electronic gas and odour detectors 61
Bioluminescence-based sensors 57
Biomedical analysis, use of CE 156
Biomolecular tracing, use of accelerator MS 142
Biopolymers, analysis using electrochemistry 298
Biosensors, application of immobilized cells and enzymes 303
Biosensors, luminescence-based 57

Capillary gel electrophoresis, separation of nucleic acids 280
Carbohydrates, database for MS data 355
Catecholamines, fluorescence derivatization for LC determination 74
CE, applicability and usefulness in biomedical analysis 156
CE, chiral separations 27
CE, use in chemical/pharmaceutical quality control 27
CE, use of electrochemical detection 325
CE, use of fluorescence detection 114
Chaos in experimental time series 169
Chemical sensors, luminescence-based 57
Chemiluminescence, application to monitoring of hydrogen peroxide in seawater 379
Chemiluminescence, mechanism of the peroxyoxalate system 232
Chemiluminescence-based sensors 57
Chemoreception, in biological systems 61
Chromatography, application of coupled techniques to pesticide residue analysis 11
Computer-aided voltammetry, use of a knowledge-based expert system 135
Computer applications, continuous flow analysis 90
Computer applications, simulations of analytical processes using Visual Basic 131
Continuous flow analysis, valve control software and hardware 90
Criminal justice, role of forensic science 1

Data analysis, chaotic chemical reactions 169
Data processing, time series analysis of scanned data 9
Database, MS data of carbohydrates 355
Detection, electrochemical, use in CE 325
Detection, electronic gas and odour sensors 61
Detection in chromatography, use of diode laser-induced fluorescence 210
Detection in chromatography, use of peroxyoxalate chemiluminescence 232
Detection in GC, a rapid scanning UV–VIS system 194
Detection, MS, use in TLC 314
Detection, SFC, use of microwave induced and inductively coupled plasmas 287
Diesel exhaust emissions, determination of fuel residues and organic combustion products 255
Digital image analysis 41

Abbreviations of techniques

CE	capillary electrophoresis
FIA	flow injection analysis
FTIR	Fourier transform infrared spectroscopy
GC	gas chromatography
HPLC	high-performance liquid chromatography
ICP-MS	inductively coupled plasma mass spectrometry
SFC	supercritical fluid chromatography
TLC	thin-layer chromatography

Diode lasers, detection in chromatography 210
Dissociation constants, program for graphical evaluation from spectrophotometric data 310
Drug screening, toxicological, use of TLC 222

Electrochemical detection, use in CE 325
Electrochemistry, determination of biopolymers 298
Electrospray ionization MS, growth and trends 307
Elemental analysis, ICP-MS 68
Environmental speciation studies of mercury 245
Environmental speciation studies using hyphenated techniques 17
Ethanol biosensors, application of immobilized cells and enzymes 303
Expert system, application to voltammetric method development 135
Extended X-ray absorption fine structure 218

FIA, computer-controlled, use of the software package FIACRE 230
FIA, use of solid-phase reactors 149
FIACRE, software for automated FIA 230
Flow-rate gradient technique, application to automatic determination of physico-chemical parameters 373
Flow reversal flow injection analysis, computer considerations 90
Fluorescence detection, diode laser-induced, use in chromatography 210
Fluorescence detection, use in CE 114
Fluorescence microscopy, use of an intensified CCD camera 32
Fluorescence spectroscopy, *in situ* analysis using nanosecond decay time imaging 32
Fluorogenic reagents, application to LC determination of catecholamines 74
Forensic science, role in criminal justice processes 1
FTIR spectroscopy, application to complex biological systems 206
Fuel residues, analysis of diesel exhaust emissions 255
Full Spectrum Quantitation algorithm, use in multicomponent analysis 86

Gasoline, analysis by GC with rapid scanning absorbance detection 194
Gas sensors, electronic 61
GC, high-molecular-mass hydrocarbons 187
GC–absorbance detection, analysis of gasoline 194
Gel-filled capillaries, use in CE 280
Geochemistry, organic, high-molecular-mass hydrocarbons 187

High-field NMR, application to quantitative evaluation of mixtures 332
HPLC, determination of antioxidants in polymers 164
HPLC, in-process control of insulin production 389
HPLC, liquid crystal stationary phases 259
HPLC, polymer coatings as stationary phases 368
HPLC, use of silica based solid-phase reagents 80
Hydrocarbons, high-molecular-mass GC analysis 187
Hydrogen peroxide, cycling and determination in seawater 379
Hyphenated techniques, in environmental speciation studies 17
Hyphenated techniques, pesticide residue analysis 11

ICP-MS, application to biological analysis 68
Image analysis, generation and properties of images 41
Image analysis, multivariate images 121
Imaging single photon detector, use *in-situ* fluorescence analysis 32
Immobilized cells, use in bioanalysis 303
Immobilized enzymes, use in bioanalysis 303
Immunoaffinity chromatography, application to residue analysis 294
Immunoassays, a scientometric study 5
In-process control, HPLC monitoring of insulin production 389
Inductively coupled plasmas, coupling to SFC 287
Instrumental analytical techniques, comparative standing 267
Insulin, in-process control by HPLC 389
Iso-α-acids, characteristics and analysis 275
Isotope ratios, determination by ICP-MS 68

Kalman filter, use in quantitative multicomponent analysis 203

Lactate, determination using FIACRE software, automated FIA 230
Laser-induced fluorescence, detection in chromatography 210
Lasers, role in MS 384
LC, fluorogenic reagents for determination of catecholamines 74
LC–GC, pesticide residue analysis 11
LC–LC, pesticide residue analysis 11
Lipid-coated quartz-crystal balance, application to the detection of bioactive compounds 344
Lipids, FTIR spectroscopy 206
Liquid crystal stationary phases, in HPLC and SFC 259
Liquid membranes, supported, use in extraction and enrichment 106
Literature search on the Shpol'skii eponym 200

Membranes, hydrophilic and hydrophobic, use as sample probes 171
Mercury, speciation in the environment 245
Method development, computer-aided, for voltammetric analysis 135
Microdialysis, sampling of extracellular fluid of living tissue 176
Microdialysis, use in bioanalytical sample preparation 171
Microwave-induced plasmas, coupling to SFC 287
MS, accelerator, use in biomolecular tracing 142
MS, database and software for carbohydrates 355

MS, detection in TLC 314
MS, mapping of post-translational modifications of viral proteins 96
MS, use of laser techniques 384
MS–MS, determination of antioxidants in polymers 164
MSDCARB, database for MS data of carbohydrates 355
Multicomponent analysis, quantitative, use of Kalman filtering 203
Multicomponent analysis, use of the Full Spectrum Quantitation algorithm 86
Multivariate image analysis, theory and potential 121
Multivariate linear calibration algorithms, use in spectroscopy 270

Neurochemicals, monitoring in the brain by microdialysis 176
NMR, at high magnetic field strength, use for quantitation 332
Nucleic acids, separation by capillary gel electrophoresis 280

Odour sensors, electronic 61
Optical sensors, potential of bioluminescence and chemiluminescence 57
Organic compounds, analysis of diesel exhaust emissions 255
Organic geochemistry, high-molecular-mass hydrocarbons 187

Partial least squares, application to multivariate calibration in spectroscopy 270
Peroxyoxalate chemiluminescence, mechanism 232
Pesticides, LC–LC and LC–GC in residue analysis 11
Plasma spectrometric detection, use in SFC 287
Polarography, analysis of biopolymers 298
Polymer coatings, use as stationary phases in HPLC 368
Principal component analysis, multicomponent analysis 86
Principal component analysis, multivariate images 121
Principal component regression, application to multivariate calibration in spectroscopy 270
Process control, use of FIACRE software 230
Process control, use of HPLC in insulin production 389
Proteins, FTIR spectroscopy 206
Proteins, viral, mapping of post-translational modifications by MS 96

Quality control, use of CE in chemical/pharmaceutical research 27
Quartz-crystal microbalance, lipid-coated, detection of bioactive compounds 344

Radiolabelling, determination of combustion products in diesel exhaust emissions 255
Residue analysis, use of immobilized antibodies 294

Sample preparation, analysis of diesel exhaust emissions 255
Sample preparation, use of liquid membrane techniques 106
Sample preparation, use of microdialysis and ultrafiltration capillaries 171
Scientometrics, electrospray ionization MS 307
Scientometrics, immunoassays 5
Scientometrics, Shpol'skii fluorimetry 200
Scientometrics, use of instrumental analytical techniques 267
Seawater, cycling and determination of hydrogen peroxide 379
Sensors, luminescence-based 57
SFC, liquid crystal stationary phases 259
SFC, use of plasma spectrometric detection 287
Shpol'skii fluorimetry, scientometrics 200
Signal-to-noise ratios, improvement by time-series analysis 182
Silica based, solid-phase reagents, use in HPLC 80
Simulation programs, use of Visual Basic 131
Software, graphical calculation of dissociation constants from spectrophotometric data 310
Software, Kalman filtering in quantitative multicomponent analysis 203
Software, program for automated FIA 230
Software, time series analysis 9
Solid-phase reactors, use in FIA 149
Solid-phase reagents, silica based, application to derivatization in HPLC 80
Solid-state analysis, use of abrasive stripping voltammetry 359
Speciation studies in the environment using hyphenated techniques 17
Speciation studies of mercury in the environment 245
Spectroscopy, use of an imaging single photon detector 32
Spectroscopy, use of multivariate linear calibration algorithms 270
Stationary phases, bonded liquid crystal materials in HPLC and SFC 259
Stationary phases, HPLC, use of polymer coatings 368

Time resolved array detection, use of an imaging single photon detector 32
Time-series analysis, application to scanned measuring quantities 9
Time-series analysis, models for improving signal-to-noise ratios 182
TLC, MS detection 314
TLC, toxicological drug screening 222
Toxicological drug screening, use of TLC 222

Ultrafiltration capillaries, use in bioanalytical sample preparation 171
UV–VIS spectroscopy, use of the Full Spectrum Quantitation algorithm 86

Viral proteins, mapping of post-translational modifications by MS 96
Visual Basic, computer simulations of analytical processes 131
Voltammetry, abrasive stripping 359
Voltammetry, characterization of biopolymers 298
Voltammetry, computer-aided, use of a knowledge-based expert system 135

X-ray absorption near edge structure 237
X-ray absorption spectroscopy 218, 237
